

About Us: Minnesota One Health Antibiotic Stewardship Collaborative (MOHASC)

MOHASC Mission & Vision

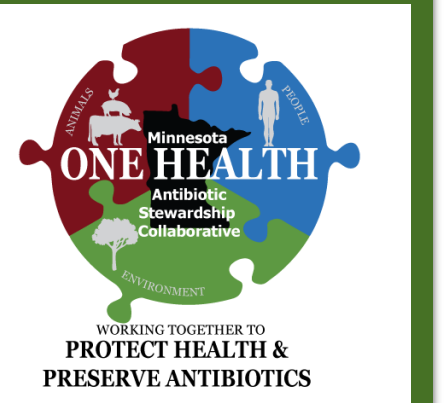

MOHASC's mission is to provide a collaborative environment to promote judicious antibiotic use and stewardship and to reduce the impact of antibiotic-resistant pathogens of human, animal, and environmental health importance. Our vision is that Minnesota leaders in human, animal, and environmental health will work together to raise awareness and change behaviors to **preserve antibiotics and treat infections effectively**.

What does MOHASC do?

MOHASC is made up four work groups: Animal, Health Care, Environment, and One Health Engagement. The groups collaborate with each other to meet the following goals: to promote understanding of One Health antibiotic stewardship across disciplines, to improve human antibiotic stewardship efforts, to improve animal antibiotic stewardship efforts, and to minimize the impact of antibiotic use on the environment.

Benefits of Joining

- No membership fees
- Expand your network by collaborating with members committed to stewardship across sectors
- Participate in quarterly work group meetings
- Attend annual in-person meeting
- Experience professional exchanges
- Share your work and/or research
- Collaborate with other members on special projects
- Volunteer to engage with the public at our state fair booth

Where can I learn more?
