

## Reportable Diseases, MN Rule 4605.7040

### Report Immediately by Telephone

<b>Anthrax (<i>Bacillus anthracis</i>)</b> a	<b>Amebiasis (<i>Entamoeba histolytica/dispar</i>)</b>	<b>Listeriosis (<i>Listeria monocytogenes</i>)</b> a
<b>Bacillosis (<i>Clostridium botulinum</i>)</b>	<b>Lyme disease (<i>Borrelia burgdorferi</i>)</b>	Lyme disease ( <i>Borrelia burgdorferi</i> )
<b>Brucellosis (<i>Brucella spp.</i>)</b> a	<b>Malaria (<i>Plasmodium spp.</i>)</b>	Malaria ( <i>Plasmodium spp.</i> )
<b>Cholera (<i>Vibrio cholerae</i>)</b> a	<b>Meningitis (caused by viral agents)</b>	Meningitis (caused by viral agents)
<b>Diphtheria (<i>Corynebacterium diphtheriae</i>)</b> a	<b>Mumps</b>	Neonatal sepsis, less than 7 days after birth (bacteria isolated from a sterile site, excluding coagulase-negative <i>Staphylococcus</i> ) a, b
<b>Hemolytic uremic syndrome</b> a	<b>Pertussis (<i>Bordetella pertussis</i>)</b> a	Retrovirus infection
<b>Measles (rubella)</b> a	<b>Pituitacosis (<i>Chlamydophila psittaci</i>)</b>	Reye syndrome
<b>Meningococcal disease (<i>Neisseria meningitidis</i>) (all invasive disease)</b> a, b	<b>Salmonellosis, including typhoid (<i>Salmonella spp.</i>)</b> a	Rheumatic fever (cases meeting the Jones Criteria only)
<b>Orthopox virus</b> a	<b>Shigellosis (<i>Shigella spp.</i>)</b> a	Rocky Mountain spotted fever ( <i>Rickettsia rickettsii, R. canadensis</i> )
<b>Plague (<i>Yersinia pestis</i>)</b> a	<b>Staphylococcus aureus</b> (vancomycin-intermediate <i>S. aureus</i> [VISA], vancomycin-resistant <i>S. aureus</i> [VRSA], and death or critical illness due to community-associated <i>S. aureus</i> in a previously healthy individual) a	<b>Salmonellosis, including typhoid (<i>Salmonella spp.</i>)</b> a
<b>Polyomyelitis</b> a	<b>Cronobacter (<i>Enterobacter</i>) sakazakii</b> (infants under 1 year of age) a	Shigellosis ( <i>Shigella spp.</i> ) a
<b>Q fever (<i>Coxiella burnetii</i>)</b> a	<b>Cryptosporidiosis (<i>Cryptosporidium spp.</i>)</b> a	Staphylococcus aureus (vancomycin-intermediate <i>S. aureus</i> [VISA], vancomycin-resistant <i>S. aureus</i> [VRSA], and death or critical illness due to community-associated <i>S. aureus</i> in a previously healthy individual) a
<b>Rabies (animal and human cases and suspected cases)</b>	<b>Cyclosporiasis (<i>Cyclospora spp.</i>)</b> a	Streptococcal disease (all invasive disease caused by Groups A and B streptococci and <i>S. pneumoniae</i> ) a, b
<b>Rubella and congenital rubella syndrome</b> a	<b>Dengue virus infection</b>	Tetanus ( <i>Clostridium tetani</i> )
<b>Severe Acute Respiratory Syndrome (SARS)</b>	<b>Diphyllobothrium latum</b> infection	Toxic shock syndrome a
<b>(1. Suspect and probable cases of SARS, 2. Cases of health care workers hospitalized for pneumonia or acute respiratory distress syndrome.)</b> a	<b>Ehrlichiosis (<i>Ehrlichia spp.</i>)</b>	Toxoplasmosis ( <i>Toxoplasma gondii</i> )
<b>Smallpox (variola)</b> a	<b>Encephalitis (caused by viral agents)</b>	Transmissible spongiform encephalopathy
<b>Tularemia (<ifrancisella i="" tularensis<="">)</ifrancisella></b> a	<b>Enteric <i>E. coli</i>/infection</b>	Trichinosis ( <i>Trichinella spiralis</i> )
<b>Unusual or increased case incidence of any suspect infectious illness a</b>	<b>Enteric <i>E. coli</i>, enteropathogenic <i>E. coli</i>, enteroinvasive <i>E. coli</i>, enterotoxigenic <i>E. coli</i></b> a	<b>Tuberculosis (<i>Mycobacterium tuberculosis</i> complex)</b> (Pulmonary or extrapulmonary sites of disease, including laboratory confirmed or clinically diagnosed disease, are reportable. Latent tuberculosis infection is not reportable.) a
	<b>Giardiasis (<i>Giardia lamblia</i>)</b>	Typhus ( <i>Rickettsia spp.</i> )
	<b>Gonorrhea (<i>Neisseria gonorrhoeae</i>)</b> c	Unexplained deaths and unexplained critical illness (possibly due to infectious cause) a
	<b>Haemophilus influenzae</b> disease	Varicella-zoster disease (1. Primary [chickenpox]: unusual case incidence, critical illness, or laboratory-confirmed cases.
	<b>(all invasive disease)</b> a	2. Recurrent [shingles]: unusual case incidence or critical illness, a
	<b>Hantavirus infection</b>	<i>Vibrio spp.</i> a
	<b>Hepatitis (all primary viral types including A, B, C, D, and E)</b>	Yellow fever
	<b>Histioplasmosis (<i>Histoplasma capsulatum</i>)</b>	<b>Yersiniosis, enteric (<i>Yersinia spp.</i>) a</b>
	<b>Human immunodeficiency Syndrome (AIDS)</b> a, d	
	<b>Influenza</b>	
	<b>(unusual case incidence, critical illness, or laboratory-confirmed cases)</b> a, e	
	<b>Kawasaki disease</b> a, e	
	<b>Kingella spp. (invasive only)</b> a, b	
	<b>Legionellosis (<i>Legionella spp.</i>)</b> a	
	<b>Leprosy (Hansen's disease) (<i>Mycobacterium leprae</i>)</b>	
	<b>Leptospirosis (<i>Leptospira interrogans</i>)</b>	
	<b>Report on separate Sexually Transmitted Disease Report Card.</b>	
	<b>d Report on separate HIV Report Card.</b>	
	<b>e For criteria for reporting laboratory-confirmed cases of influenza, see <a href="http://www.health.state.mn.us/divs/dedpc/dtopics/reportable/index.html">www.health.state.mn.us/divs/dedpc/dtopics/reportable/index.html</a>.</b>	

### Report Within One Working Day

<b>Amoebiasis (<i>Entamoeba histolytica/dispar</i>)</b>	<b>Chancroid (<i>Haemophilus ducreyi</i>)</b> c	<b>Reye syndrome</b>
<b>Arboviral disease (including, but not limited to, LaCrosse encephalitis, eastern equine encephalitis, western equine encephalitis, St. Louis encephalitis, and West Nile virus)</b>	<b>Campylobacteriosis (<i>Campylobacter spp.</i>)</b> a	<b>Retrovirus infection</b>
<b>Babesiosis (<i>Babesia spp.</i>)</b>	<b>Cat scratch disease (infection caused by <i>Bartonella spp.</i>)</b>	<b>Rocky Mountain spotted fever (<i>Rickettsia rickettsii, R. canadensis</i>)</b>
<b>Blastomycosis (<i>Blastomyces dermatitidis</i>)</b>	<b>Chancroid (<i>Haemophilus ducreyi</i>)</b> c	<b>Shigellosis (<i>Shigella spp.</i>)</b> a
<b>Coccidioidomycosis</b>	<b>Chlamydia trachomatis</b> infection c	<b>Staphylococcus aureus</b> (vancomycin-intermediate <i>S. aureus</i> [VISA], vancomycin-resistant <i>S. aureus</i> [VRSA], and death or critical illness due to community-associated <i>S. aureus</i> in a previously healthy individual) a
<b>Cronobacter (<i>Enterobacter</i>) sakazakii</b> (infants under 1 year of age) a	<b>Cryptosporidiosis (<i>Cryptosporidium spp.</i>)</b> a	<b>Streptococcal disease (all invasive disease caused by Groups A and B streptococci and <i>S. pneumoniae</i>) a, b</b>
<b>Cyclosporiasis (<i>Cyclospora spp.</i>)</b> a	<b>Cyclosporiasis (<i>Cyclospora spp.</i>)</b> a	<b>Tetanus (<i>Clostridium tetani</i>)</b>
<b>Dengue virus infection</b>	<b>Dengue virus infection</b>	<b>Toxic shock syndrome a</b>
<b>Ehrlichiosis (<i>Ehrlichia spp.</i>)</b>	<b>Diphyllobothrium latum</b> infection	<b>Toxoplasmosis (<i>Toxoplasma gondii</i>)</b>
<b>Encephalitis (caused by viral agents)</b>	<b>Ehrlichiosis (<i>Ehrlichia spp.</i>)</b>	<b>Transmissible spongiform encephalopathy</b>
<b>Enteric <i>E. coli</i>/infection</b>	<b>Encephalitis (caused by viral agents)</b>	<b>Trichinosis (<i>Trichinella spiralis</i>)</b>
<b>Enteric <i>E. coli</i>, enteropathogenic <i>E. coli</i>, enteroinvasive <i>E. coli</i>, enterotoxigenic <i>E. coli</i></b> a	<b>Giardiasis (<i>Giardia lamblia</i>)</b>	<b>Tuberculosis (<i>Mycobacterium tuberculosis</i> complex)</b> (Pulmonary or extrapulmonary sites of disease, including laboratory confirmed or clinically diagnosed disease, are reportable. Latent tuberculosis infection is not reportable.) a
<b>Gonorrhea (<i>Neisseria gonorrhoeae</i>)</b> c	<b>Gonorrhea (<i>Neisseria gonorrhoeae</i>)</b> c	<b>Typhus (<i>Rickettsia spp.</i>)</b>
<b>Haemophilus influenzae</b> disease	<b>Haemophilus influenzae</b> disease	<b>Unexplained deaths and unexplained critical illness (possibly due to infectious cause) a</b>
<b>(all invasive disease)</b> a	<b>(all invasive disease)</b> a	<b>Varicella-zoster disease (1. Primary [chickenpox]: unusual case incidence, critical illness, or laboratory-confirmed cases.</b>
<b>Hantavirus infection</b>	<b>Hantavirus infection</b>	<b>2. Recurrent [shingles]: unusual case incidence or critical illness, a</b>
<b>Hepatitis (all primary viral types including A, B, C, D, and E)</b>	<b>Hepatitis (all primary viral types including A, B, C, D, and E)</b>	<b><i>Vibrio spp.</i> a</b>
<b>Histioplasmosis (<i>Histoplasma capsulatum</i>)</b>	<b>Histioplasmosis (<i>Histoplasma capsulatum</i>)</b>	<b>Yellow fever</b>
<b>Human immunodeficiency Syndrome (AIDS)</b> a, d	<b>Human immunodeficiency Syndrome (AIDS)</b> a, d	<b>Yersiniosis, enteric (<i>Yersinia spp.</i>) a</b>
<b>Influenza</b>	<b>Influenza</b>	
<b>(unusual case incidence, critical illness, or laboratory-confirmed cases)</b> a, e	<b>(unusual case incidence, critical illness, or laboratory-confirmed cases)</b> a, e	
<b>Kawasaki disease</b> a, e	<b>Kawasaki disease</b> a, e	
<b>Kingella spp. (invasive only)</b> a, b	<b>Kingella spp. (invasive only)</b> a, b	
<b>Legionellosis (<i>Legionella spp.</i>)</b> a	<b>Legionellosis (<i>Legionella spp.</i>)</b> a	
<b>Leprosy (Hansen's disease) (<i>Mycobacterium leprae</i>)</b>	<b>Leprosy (Hansen's disease) (<i>Mycobacterium leprae</i>)</b>	
<b>Leptospirosis (<i>Leptospira interrogans</i>)</b>	<b>Leptospirosis (<i>Leptospira interrogans</i>)</b>	

**To Report a Case:** Fill out a Minnesota Department of Health case report form and mail to the above address. For diseases that require immediate reporting, or for questions about reporting, call the Acute Disease Investigation and Control Section at: 651-201-5414 or 1-877-676-5414 or fax form to 651-201-5743.

**To Send an Isolate to MDH:** If you are sending an isolate by U.S. mail, use regulatory compliant transport packaging and send to: PO Box 64899, St. Paul, MN 55164. If you are using a courier, use transport packaging appropriate for the specific courier and send to: 601 North Robert Street, St. Paul, MN 55155. To request pre-paid transport labels (both mail and courier) and packaging, or for other assistance, call the Public Health Laboratory Specimen Handling Unit at: 651-201-4953.

The MDH Antibogram is available on the MDH web site (<http://www.health.state.mn.us>). Laminated copies can be ordered from: Antibogram, Minnesota Department of Health, Acute Disease Investigation and Control Section, 625 North Robert Street, PO Box 64975, St. Paul, MN 55164-0975.

**Sentinel Surveillance** (sites designated by the Commissioner)

- Methicillin-resistant *Staphylococcus aureus* (invasive only)** a, b
- Carbapenem-resistant *Enterobacteriaceae* spp. (CRE) and carbapenem-resistant *Acinetobacter* spp. a**
- Clostridium difficile** a

## Antimicrobial Susceptibilities of Selected Pathogens, 2012

Sampling Methodology  
 † all isolates tested  
 ‡ ~10% sample of statewide isolates received at MDH  
 § isolates from a normally sterile site

Number of Isolates Tested	92	106	63	39	79	12	159	512	478	123
---------------------------	----	-----	----	----	----	----	-----	-----	-----	-----

	% Susceptible									
<b>β-lactam antibiotics</b>	amoxicillin									92
	ampicillin		68	94	85		75	100	100	
	penicillin					0	75	100	100	80
	cefixime					100				
	cefepodoxime					100				
	cefuroxime sodium									89
	cefotaxime							100	100	90
	ceftriaxone		100	97	100	100	100			90
<b>Other antibiotics</b>	meropenem						100			89
	ciprofloxacin	75 <sup>1</sup>	99	100	100	88	100			
	levofloxacin						100	99	99	100
	azithromycin	100				99	100			
	erythromycin	100						92	46	66
	clindamycin							98/93 <sup>6</sup>	66/55 <sup>7</sup>	93
	chloramphenicol		75	100	95					99
	gentamicin	84								
	spectinomycin					100				
	tetracycline	42				17		94		91
<b>TB antibiotics</b>	trimethoprim/sulfamethoxazole (TMP/SMX)		97	100	33					84
	vancomycin							100	100	100
	ethambutol									98
	isoniazid									90
	pyrazinamide									91
	rifampin						100			98

### Trends, Comments, and Other Pathogens

<sup>1</sup> <i>Campylobacter</i> spp.	Quinolone susceptibility was determined for all isolates (n=889); isolates that were screened as nalidixic acid-susceptible were assumed to be ciprofloxacin susceptible. Only 25% of isolates from patients returning from foreign travel (n=144) were susceptible to quinolones. <i>Campylobacter</i> susceptibilities were determined using CDC NARMS 2010 Report Standards ( <a href="http://www.cdc.gov/narms">www.cdc.gov/narms</a> ).
<sup>2</sup> <i>Salmonella enterica</i> (non-typhoidal)	Antimicrobial treatment for uncomplicated gastroenteritis due to <i>Salmonella</i> is not generally recommended.
<sup>3</sup> <i>Shigella</i> spp.	For cases in which treatment is required and susceptibility is unknown or an ampicillin and TMP/SMX-resistant strain is isolated, azithromycin for 3 days, parenteral ceftriaxone for 5 days, or a fluoroquinolone (such as ciprofloxacin) for 3 days should be administered. For susceptible strains, ampicillin or TMP/SMX is effective; amoxicillin is less effective because of rapid absorption from the gastrointestinal tract. (2012 Red Book)
<sup>4</sup> <i>Neisseria gonorrhoeae</i>	Routine resistance testing for <i>Neisseria gonorrhoeae</i> by MDH PHL was discontinued in 2008. Susceptibility results were obtained from the CDC Regional Laboratory in Cleveland, OH, and are for isolates obtained through the Gonococcal Isolate Surveillance Program. Isolates (n = 79) were received from the Red Door Clinic in Minneapolis. Resistance criteria for cefixime, ceftriaxone, cefepodoxime, and azithromycin have not been established; data reflect reduced susceptibility using provisional breakpoints (minimum inhibitory concentration ≥0.5 µg/ml, ≥0.5 µg/ml, ≥1.0 µg/ml, and ≥2.0 µg/ml, respectively). Also, the number of <i>Neisseria gonorrhoeae</i> isolates submitted for testing increased from 47 in 2011 to 79 in 2012
<sup>5</sup> <i>Neisseria meningitidis</i>	In 2012, 3 case-isolates were intermediate to penicillin and ampicillin. There were no case-isolates with ciprofloxacin resistance. In 2008, 2 isolates from cases occurring in northwestern MN had nalidixic acid MICs >8 µg/ml and ciprofloxacin MICs of 0.25 µg/ml indicative of resistance. The MIC interpretive criteria for azithromycin, ciprofloxacin, levofloxacin, and rifampin apply to prophylactic therapy and do not apply to therapy of patients with invasive meningococcal disease.
<sup>6</sup> Group A <i>Streptococcus</i>	The 159 isolates tested represent 94% of 169 total cases. Among 10 erythromycin-resistant, clindamycin-susceptible or intermediate isolates 8 (80%) had inducible resistance to clindamycin for a total of 93% that were susceptible to clindamycin and did not exhibit inducible clindamycin resistance.
<sup>7</sup> Group B <i>Streptococcus</i>	90% (9/10) of early-onset infant, 100% (13/13) of late-onset infant, 89% (8/9) of maternal, and 91% (482/532) of other invasive GBS cases were tested. Among 101 erythromycin-resistant, clindamycin susceptible or intermediate isolates 57 (56%) had inducible resistance to clindamycin for a total of 55% (283/512) that were susceptible to clindamycin and did not exhibit inducible clindamycin resistance. 70% (21/30) of infant and maternal cases were susceptible to clindamycin and did not exhibit inducible clindamycin resistance.
<sup>8</sup> <i>Streptococcus pneumoniae</i>	The 478 isolates tested represent 95% of 503 total cases. Reported above are the proportions of case-isolates susceptible by meningitis breakpoints for cefotaxime, ceftriaxone (intermediate = 1.0 µg/ml, resistant > 2.0 µg/ml) and penicillin (resistant > 0.12 µg/ml). By nonmeningitis breakpoints (intermediate = 2.0 µg/ml, resistant > 4.0 µg/ml), 96% (458/478) of isolates were susceptible to cefotaxime and ceftriaxone. By nonmeningitis breakpoints (intermediate = 4.0 µg/ml, resistant > 8.0 µg/ml), 95% (455/478) of isolates were susceptible to penicillin. Isolates were screened for high-level resistance to rifampin at a single MIC; all were < 2 µg/ml. Using meningitis breakpoints, 17% (83/478) of isolates were resistant to two or more antibiotic classes and 9% (42/478) were resistant to three or more antibiotic classes. (CLSI also has breakpoints for oral penicillin V; refer to the most recent CLSI recommendations for information).
<sup>10</sup> <i>Mycobacterium tuberculosis</i> (TB)	National guidelines recommend initial four-drug therapy for TB disease, at least until first-line drug susceptibility results are known. Of the 23 TB cases reported in 2012 resistant to at least one first-line drug, 21 (91%) were in foreign-born, including the 1 multidrug-resistant (MDR-TB) case (i.e., resistant to at least isoniazid and rifampin) reported. There were no cases of extensively drug-resistant TB (XDR-TB) (i.e., resistance to at least isoniazid, rifampin, any fluoroquinolone, and at least one injectable second-line drug).
Invasive methicillin-resistant <i>Staphylococcus aureus</i> (MRSA)	233 cases of invasive MRSA infection were reported in 2012 in Ramsey and Hennepin Counties, of which 152 (65%) were from blood, 79% (184/233) had an isolate submitted and antimicrobial susceptibility testing conducted. Of cases with an isolate, 83% (153/184) were epidemiologically classified as healthcare-associated. Susceptibilities were as follows: 100% to linezolid, telyavancin, and vancomycin; 99% to daptomycin, doxycycline, and rifampin; 98% gentamicin, tetracycline, and TMP/SMX; 22% to levofloxacin; 11% to erythromycin. Isolates were screened for mupirocin resistance with 3% exhibiting high-level resistance (MIC >256 µg/ml). 42% (64/153) were susceptible to clindamycin by broth microdilution; however, 23/47 isolates that were clindamycin susceptible or intermediate and erythromycin resistant were found to have inducible resistance to clindamycin (27% susceptible and negative for inducible clindamycin resistance). For community-associated (CA) cases (31/39 with isolates), susceptibilities were as follows: 100% to daptomycin, doxycycline, gentamicin, linezolid, rifampin, telavancin, TMP/SMX, vancomycin; 97% to tetracycline; 42% to levofloxacin; 13% to erythromycin. 3% (1/31) of isolates screened for mupirocin resistance exhibited high-level resistance. 77% (24/31) were susceptible to clindamycin by broth microdilution; however, 7/20 isolates that were clindamycin susceptible or intermediate and erythromycin resistant were found to have inducible clindamycin resistance (55% susceptible and negative for inducible clindamycin resistance). No VISA or VRSA cases were confirmed in 2012.
<i>Bordetella pertussis</i>	In 2012, no cases of pertussis were tested for susceptibility in Minnesota. Nationally, only 11 erythromycin-resistant <i>B. pertussis</i> cases have been identified to date.
Carbapenem-resistant <i>Enterobacteriaceae</i> (CRE)	Of 77 CRE isolates submitted from 76 cases, 29 (38%) were <i>bla</i> <sub>KPC</sub> positive by PCR including 15 (52%) <i>K. pneumoniae</i> , 12 (41%) <i>E. cloacae</i> , 1 (3.5%) <i>E. coli</i> , and 1 (3.5%) <i>K. oxytoca</i> . 17 (59%) were residents of the 7-county metro area. Additionally, 3 isolates from two non-MN residents were positive for <i>bla</i> <sub>NDM</sub> by PCR: 2 <i>K. pneumoniae</i> and 1 <i>E. coli</i> . The definition of CRE is based on current CLSI breakpoints and includes Enterobacteriaceae that are nonsusceptible to a carbapenem (excluding ertapenem) and resistant to all tested third generation cephalosporins. Due to their intrinsic resistance to imipenem, additional criteria apply for all species of <i>Proteus</i> , <i>Providencia</i> , and <i>Morganella</i> .
<i>Escherichia coli</i> O157:H7	Antimicrobial treatment for <i>E. coli</i> O157:H7 infection is not recommended.
