Native American Community Clinic Community Testing Demographics

These demographics and results are for testing completed June 27, 2020 at Harding High School, St. Paul, MN.

The State of Minnesota, in partnership with Native American Community Clinic and M Health Fairview, offered COVID-19 testing at Harding High School, St. Paul, MN.

- Testing was open to everyone. Residents of neighboring communities were eligible to be tested. People who lived further away were encouraged to find a local clinic before registering.
- People with and without symptoms were tested.
- Testing was free, no insurance was needed.
- Pre-registration was encouraged and could be done online and by phone.
- Testing was administered by professional medical staff.

Positivity rate: 2.95%

- 237 people were tested.
- 7 people were confirmed positive (cases).

Symptoms

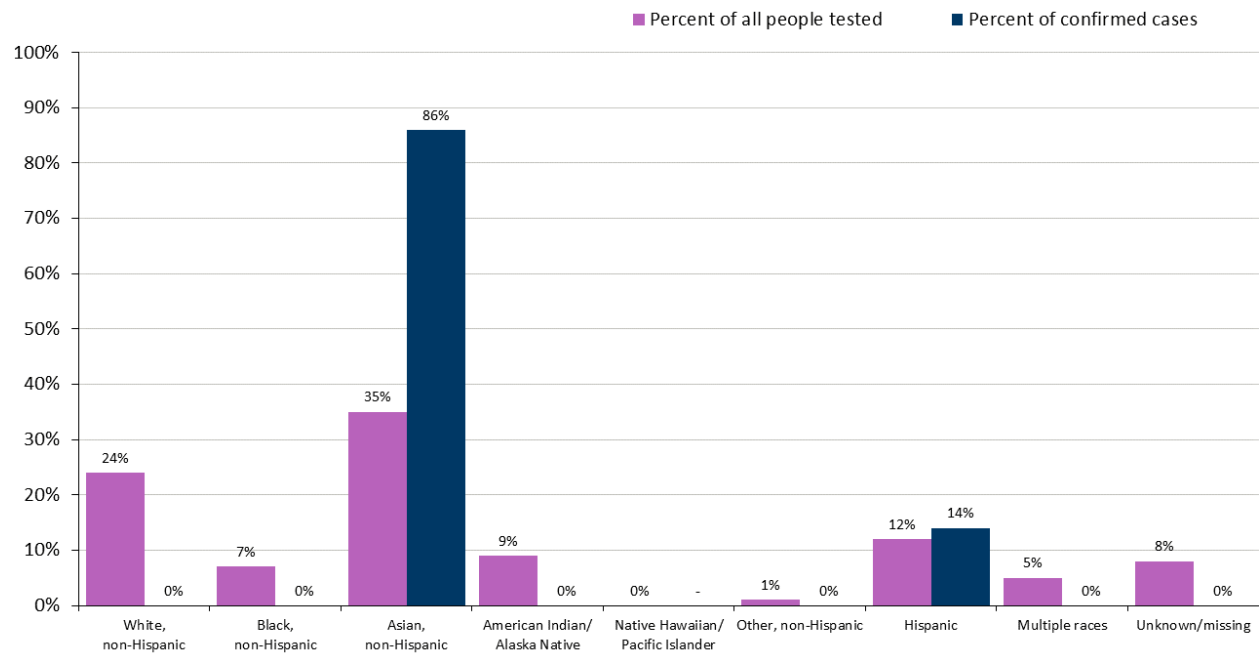

57% of those who tested positive did not have symptoms at the time of testing. This speaks to the importance of staying home and isolating if you believe you were exposed and wearing a mask and washing your hands to reduce potential spread.

Age

Age	Age of all people tested	Age of confirmed cases
Age range	2-87 years	6-71 years
Average age	36	34

Race/Ethnicity

People were able to select from all race/ethnicity categories that applied to them. Those listed within a race/ethnicity category only selected one race/ethnicity. If they selected more than one, they are listed under multiple races.

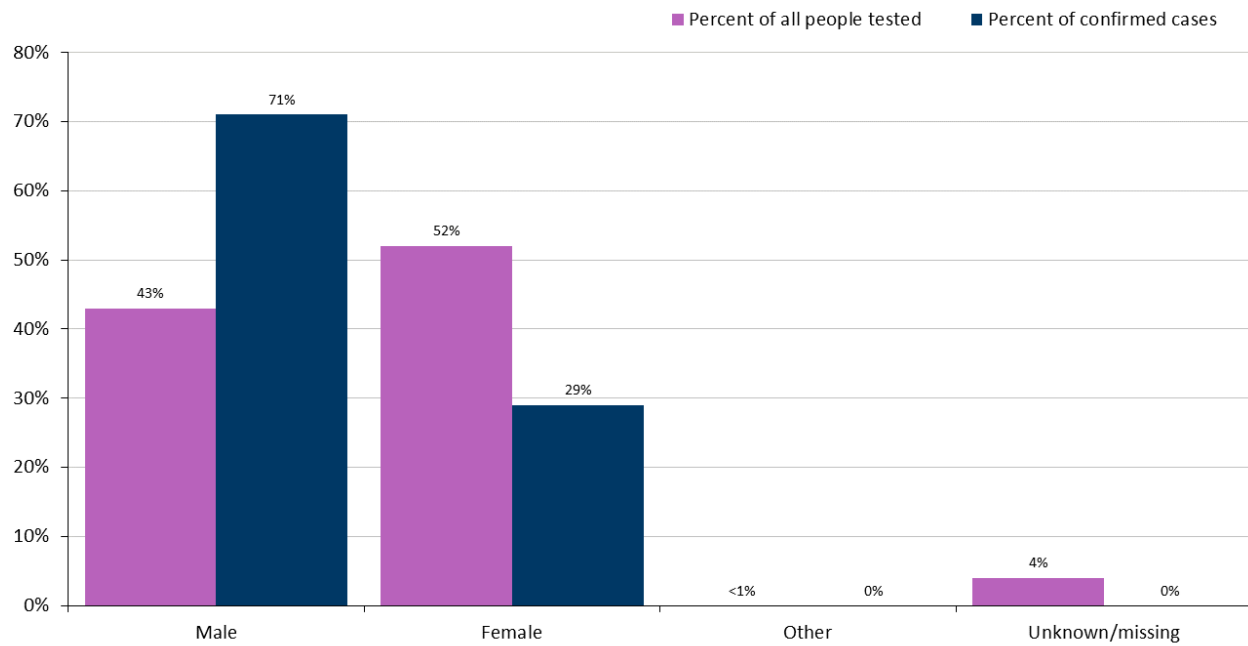

Race/Ethnicity	Number of people tested	Percent of all people tested	Number of confirmed cases	Percent of confirmed cases
White, non-Hispanic	57	24%	0	0%
Black, non-Hispanic	16	7%	0	0%
Asian, non-Hispanic	82	35%	6	86%
American Indian/Alaska Native	21	9%	0	0%
Native Hawaiian/Pacific Islander	0	0%	-	-
Other, non-Hispanic	2	1%	0	0%
Hispanic	28	12%	1	14%
Multiple races	11	5%	0	0%
Unknown/missing	20	8%	0	0%
Total	237		7	

- There were higher rates of positive cases in Asian and Hispanic communities compared to other race/ethnic groups.
 - Higher positive COVID-19 rates in these communities can be attributed to systemic barriers, not individual behavior or cultural factors.

Gender

People were only able to select one gender.

Gender	Number of people tested	Percent of all people tested	Number of confirmed cases	Percent of confirmed cases
Male	102	43%	5	71%
Female	124	52%	2	29%
Other	1	<1%	0	0%
Unknown/missing	10	4%	0	0%
Total	237		7
